

THE SAGHRO FILES

CONSOLIDATED EXHIBIT OF OPEN CORRESPONDENCE

7-15 September 2026 | Prepared 17 September 2026

Purpose and scope. This exhibit consolidates the open/public correspondence and the native-email transmission record supplied for the period beginning 7 September 2026. It is designed as a documentary book-end to the present correspondence sequence and as a readable component of the Primary Evidential Record.

Evidential status. Open letters, the press release and the Parliamentary statement are reproduced in their source-document form. Emails are rendered from the native .eml records and identified by Message-ID and SHA-256 hash. The native .eml files remain the controlling primary record for email metadata and content. Confidential criminal-referral and underlying evidential attachments are not reproduced; their transmission is recorded by the relevant emails.

Boundary. This exhibit records communications and transmission. It does not, by itself, establish the truth of underlying allegations contained in the correspondence or attachments.

EXHIBIT INDEX

Ref	Date	Document / communication	Pages
A01	7 September 2026	Open correspondence to the Prime Minister	2-4
E01	7 September 2026	Transmission email: Open correspondence / Report No. 1 / criminal referral	5
A02	11 September 2026	Press Release: Independent project launched to test the evidential basis of judicial findings	6-8
E02	11 September 2026	Press distribution email	9
A03	11 September 2026	Statement to Members of Parliament	10-11
E03	11 September 2026	Parliamentary/public-record distribution email	12-13
A04	15 September 2026	Open correspondence to the Prime Minister: The Imerman Devices	14-17
E04	15 September 2026	Email 1 of 3: Core Record	18
E05	15 September 2026	Email 2 of 3: Criminal Referrals	19
E06	15 September 2026	Email 3 of 3: Underlying Evidential Material	20

Record sequence

7 September: initial open correspondence and transmission -> 11 September: public/press and Parliamentary externalisation -> 15 September: renewed open correspondence and complete three-email controlled transmission.

As separately recorded in the chronology prepared on 17 September 2026, no acknowledgment or substantive response had been received by the sender as at 13:29 BST on 17 September 2026. That status is not proved by the sent-email exhibits themselves and is therefore not treated here as a source-email fact.

DOCUMENT AND TRANSMISSION INDEX

Open correspondence and transmission record | 7-15 September 2026

This index maps the open/public documents and the corresponding native-email transmission records reproduced in the consolidated exhibit. Recipient fields preserve the distinction between a document's principal addressee and the actual To/Cc/Bcc fields recorded in the native email.

Ref.	Date	Document / transmission	Summary	Recipients / transmission record
A01	7 Sep 2026	Open Correspondence to the Prime Minister	Announces the Independent Evidential Reconstruction process; explains construction of an independently inspectable evidential record; introduces the first bounded reconstruction concerning the Imerman devices and records continuing Chancery consequences.	Prime Minister as document addressee; transmitted through E01 and copied to MPS Commissioner/Commissioner's Office, Lord Chancellor's office, Justice Committee, Attorney General correspondence and named MPs.
E01	7 Sep 2026	Email - Open correspondence / Report No. 1 / criminal referral	Transmits the 7 September open letter, Volume I Imerman report, Volume II evidence bundle/hash manifest and the 7 September criminal referral to the Metropolitan Police.	To: Andy Burnham MP. Cc: MPS Commissioner/Commissioner's correspondence addresses; Lord Chancellor's office; Andy Slaughter MP; Justice Committee; Attorney General correspondence; Joe Powell MP.
A02	11 Sep 2026	Press Release - Independent Evidential Reconstruction Project launched	Public announcement of the project and methodology; explains that recorded findings will be tested against the underlying evidential record and introduces the first Imerman reconstruction.	Distributed to press/editorial recipients through E02.
E02	11 Sep 2026	Email - Press Release distribution	Press distribution transmitting the press release, methodology summary, 7 September PM correspondence, Volume I and compressed Volume II.	To: Nadia Zahmoul. Saved native email records no Bcc recipients; body addressed 'Dear Editor'.
A03	11 Sep 2026	Statement to Members of Parliament	Parliamentary statement explaining the launch of the Independent Evidential Reconstruction Project, the Primary Evidential Record and the first bounded Imerman reconstruction.	Members of Parliament through E03.
E03	11 Sep 2026	Email - Public record / Parliamentary distribution	Parliamentary/public-record distribution transmitting project materials and the Statement to Members of Parliament.	To: Nadia Zahmoul. Bcc: multiple Members of Parliament recorded in the native email.
A04	15 Sep 2026	Open Correspondence - The Imerman Devices	Substantive open letter concerning non-examination and unresolved custody of the devices, evidential significance, due process and prejudice, accountability, effective remedy and continuing Chancery consequences.	Prime Minister and Sir Mark Rowley identified as principal addressees in the correspondence; transmitted through E04-E06.
E04	15 Sep 2026 18:01 BST	Email 1 of 3 - Core Record	Transmits the 15 September open correspondence and core Imerman evidential record: Volume I, Volume II, hash manifest and distribution schedule. Expressly requests acknowledgment of all three emails and attachments.	To: Andy Burnham MP. Cc: MPS Commissioner/Commissioner's correspondence addresses; Lord Chancellor's office; Andy Slaughter MP; Justice Committee; Attorney General correspondence; Joe Powell MP; Shabana Mahmood MP; Alex Norris MP. Body addressed 'Dear Prime Minister and Sir Mark'.
E05	15 Sep 2026 18:02 BST	Email 2 of 3 - Criminal Referrals	Confidential transmission of the three-part criminal referral and controlling Imerman criminal referral dated 7 September; records that the materials are submissions for investigation/assessment and not public-authority findings.	Same To/Cc recipient structure as E04; body addressed 'Dear Prime Minister and Sir Mark'.
E06	15 Sep 2026 18:04 BST	Email 3 of 3 - Underlying Evidential Material	Confidential transmission of Package D containing underlying evidential and analytical material; records completion of the three-email transmission and again requests acknowledgment of Emails 1-3 and attachments.	Same To/Cc recipient structure as E04; body addressed 'Dear Prime Minister and Sir Mark'.

Note on recipients and evidential status. Recipient information is taken from the native email records where available. 'To', 'Cc' and 'Bcc' describe the corresponding native email-header fields. Where a document or email body identifies a principal addressee separately from the transmission header, that distinction is preserved. Documents identified as confidential are listed to establish their transmission but are not reproduced as underlying attachments in this open consolidated exhibit.

Record position at 17 September 2026. The above sequence records the externalisation and transmission of the Primary Evidential Record to date. Acknowledgment of the completed three-email transmission of 15 September was expressly requested. As at 17 September 2026, no acknowledgment, substantive response or communicated engagement had been received by the sender. That status is sender-reported and is not established by the sent-email records alone.

The Rt Hon the Prime Minister

10 Downing Street
London SW1A 2AA

7 September 2026

Dear Prime Minister

A serious finding against a person should follow the evidence and a fair process. That is not a controversial proposition, and it is not one I am asking you to accept on my word. It is testable. This letter is to tell you that I am having it tested.

I am commissioning an independent evidential archive. It will hold the original material — judgments, orders, applications, correspondence, medical records, digital evidence and institutional responses — in native form, with provenance and metadata preserved and an auditable record of what was received and when. It follows established public-inquiry evidence-management practice, including The National Archives Public Inquiry Guidance. It will be searchable, indexed and capable of independent inspection and export.

A forensic reconstruction will then test the findings against that record. Findings will be examined one by one and, where necessary, paragraph by paragraph: what evidence was capable of supporting each finding; what evidence was contrary to it or qualified it; whether the matter was put to me; what opportunity I had to answer it; and what reasons were actually recorded. Applications and orders will be reconstructed the same way, through filing, notice, participation, submissions, hearing, determination and reasons. Where the evidence does not resolve a question, that will be recorded as the outcome. An absence will not be converted into proof of anything.

Independent lawyers will then test both the reconstruction and the evidence against the law. They will have direct access to the archive, so they can check the reconstruction against the underlying material rather than take it on trust. Their conclusions will in turn be open to separate independent review against the same record.

The governing condition throughout is that no institution whose conduct or response falls within the scope of this work will control the evidence, the questions, the investigator, the analysis, the legal assessment, the review or the conclusions.

Project A is the first bounded reconstruction. It covers February to June 2024. Its purpose is to establish what the evidence shows about the events, decisions and reasons of that period, before any wider conclusion is drawn. The process is capable of supporting my position, of qualifying it, or of contradicting it. I have

designed it that way deliberately, because a process that can only confirm what I already believe would be worth nothing.

I have taken this step because the existing accountability architecture has not supplied a route out. I have used the family proceedings, the Court of Appeal, judicial review, and the ministerial, parliamentary and oversight channels. There have been many decisions and procedural outcomes, and I do not suggest otherwise. What has not happened is an independent substantive determination of the underlying evidential questions. Where questions about an originating process are returned to, or resolved by reference to, the institutions and records whose own handling of those questions is part of what needs examining, accountability becomes recursive. An independently inspectable record is a way of testing the underlying questions without presuming the answer.

There are continuing consequences while that examination is under way. Litigation funding obtained to pay for representation in the underlying proceedings became repayable on their conclusion, and is the subject of live proceedings in the Chancery Division, Detach Lending Limited v Zahmoul, BL-2024-001217, in which default judgment for £1,008,848.42 was entered on 31 March 2025. I do not consider it safe for those proceedings to progress further against me while the integrity of the process that produced the liability is itself under independent examination. My position is that no further substantive step should be taken in them until that review is complete and its conclusions are capable of scrutiny.

For the same reason the evidential process will operate openly. I intend to maintain open correspondence with your office as the record develops, and, subject to any applicable legal restriction, material designated as open correspondence may also be made available to Members of Parliament, to the press and to organisations concerned with the rule of law and institutional accountability. This is not publicity in place of determination. It is to ensure that the existence, the method and the outputs of the process are themselves open to scrutiny.

I will provide your office with bounded reports as the work proceeds. Each will address a defined question, identify the material available, distinguish what the record establishes from what it does not, and record the institutional treatment identifiable from the evidence. Where later reconstruction corrects or qualifies an earlier report, that correction will itself form part of the record.

The first report accompanies this letter. It concerns two digital devices placed into court-linked custody in April 2021 and never examined, and the material returned to me by the other party in May 2021. It sets out what is documented about the duty to review those devices, what was transmitted and to whom, what followed, and the present position — which is that their whereabouts are unknown, no authority for their release has been identified, and no audit trail has been produced. It is

accompanied by an evidence bundle of 43 documents and by a criminal referral to the Metropolitan Police made today.

I am not asking the Government to determine the underlying allegations or to interfere with any judicial decision. I am telling you what I am doing, why, and where it will be published.

Conclusions can follow the evidence. My purpose is to make sure there is an independent structure capable of establishing, transparently and reproducibly, what that evidence actually shows.

Yours sincerely

Nadia Zahmoul

Email body

Dear Prime Minister,

I write to you in your capacity as Prime Minister. This is open correspondence.

I am commissioning an independent evidential archive and a forensic reconstruction of the documentary record of proceedings in the Family Division of the High Court and their subsequent treatment, followed by an independent legal assessment. No institution whose conduct or response falls within the scope of that work will control any part of it.

The attached letter sets out what I am doing and why. It also sets out my position on live proceedings in the Chancery Division, Detach Lending Limited v Zahmoul, BL-2024-001217, which seek to enforce a liability arising from the proceedings now under examination.

The first report accompanies the letter. It concerns two digital devices placed into court-linked custody in April 2021 and never examined. Their present whereabouts are unknown, no authority for their release has been identified, and no audit trail has been produced. It is accompanied by an evidence bundle of 43 documents, each identified by a content hash, and by a criminal referral made to the Metropolitan Police Service today.

Enclosed:

1. Letter to the Prime Minister, 7 September 2026
2. The Imerman Devices and the Criminal Referral — Report No. 1, Volume I
3. Evidence Bundle, Volume II — 43 items, 293 pages
4. Hash manifest for the evidence bundle
5. Criminal referral to the Metropolitan Police Service, 7 September 2026

I am copying the Commissioner of the Metropolitan Police Service, to whom the criminal referral is addressed; the Private Secretary to the Lord Chancellor; the Chair of the Justice Committee and the Committee; my MP; and the Attorney General.

I am not asking the Government to determine any underlying allegation or to interfere with any judicial decision.

Yours sincerely

Nadia Zahmoul

PRESS RELEASE

INDEPENDENT EVIDENTIAL RECONSTRUCTION PROJECT LAUNCHED TO TEST JUDICIAL FINDINGS AGAINST THE UNDERLYING EVIDENCE

11 September 2026

An independently commissioned evidential reconstruction project has been established to examine whether serious judicial findings, material procedural outcomes and subsequent institutional accounts can be traced to, and supported by, the underlying evidential record.

The underlying matters have passed through family proceedings, appellate proceedings, judicial review and a number of ministerial, Parliamentary, oversight and law-enforcement channels. There have been many decisions, responses and procedural outcomes. The concern requiring independent examination is different: whether the underlying evidential propositions were themselves examined and substantively determined, and whether material findings withstand comparison with the source record.

Why this project exists

Let me be clear: I should not have to do this. I should not have to construct an independent evidential infrastructure in order to establish whether serious findings made against me are supported by the evidence. I am doing so because, after more than two years of proceedings and accountability processes, I have been unable to identify an independent substantive examination of the underlying evidential questions. **These are not propositions that should be accepted because I assert them. They are propositions that can be tested.**

The project does not ask Members of Parliament or journalists to decide those questions. It creates an external evidential structure through which they can be tested independently.

Evidence first

The first component is an independent Primary Evidential Record: a preserved, searchable, indexed and provenance-controlled collection of the original material, with relevant metadata and an auditable history of receipt, preservation and retrieval.

The second component is bounded forensic reconstruction. Defined questions are tested against the underlying record by examining contemporaneous sources, chronology, supporting evidence, contrary or qualifying evidence, procedural treatment and recorded reasons. Where the record does not resolve a question, that is recorded as the outcome; absence is not converted into proof.

Independent lawyers and, where necessary, appropriately qualified specialists will then assess the reconstructed facts within their expertise. Material conclusions may be subjected to separate critical review against the same primary record.

The externalised evidential record is the foundation of the project, not its final analytical or legal exercise. Its purpose is to create an independently preserved, searchable and reproducible evidential state from which forensic reconstruction, independent legal or specialist assessment and, ultimately, independent determination can take place as separate later stages. Externalisation does not determine the evidence, establish legal error or provide a remedy.

Independent by design

No institution whose conduct or response falls materially within the scope of a reconstruction controls the evidential record, the questions asked, the reconstruction, the legal or specialist assessment, the independent review or the conclusions.

Project A — the first bounded reconstruction

Project A covers February to June 2024. Its purpose is to establish what the defined evidential record shows about the events, evidence, participation arrangements, findings, decisions and reasons of that period before any wider conclusion is drawn.

The process is deliberately capable of supporting, qualifying or contradicting the commissioning party's present position. A process capable only of confirmation would not provide an independent evidential test.

First evidential example — the Imerman devices

Report No. 1, Volume I, and its supporting Volume II evidence bundle provide the first bounded public record. The report concerns two digital devices placed into court-linked custody in 2021, the associated documentary material, the history of proposed review and the subsequent attempts to establish custody, preservation, review and audit trail.

The report records the present documentary position identified by the commissioning party, including that the devices were never forensically examined, that their present whereabouts have not been established, that no authority for release has been identified, and that no complete audit trail has been produced. Volume II contains the source documents relied upon so that those propositions can be checked rather than accepted on assertion.

The project does not ask recipients to infer criminal liability from those circumstances. The reconstruction question is evidential and procedural: what happened to the devices and associated material, what decisions were made about them, by whom, on what basis, and what can the primary record establish?

What the project does not presume

The project will not treat an evidential discrepancy as proof of dishonesty, bias, misconduct, suppression or unlawfulness. It will not treat a missing record as proof that an event did not

occur. It will not ask a reconstruction professional to decide questions requiring legal, medical, digital-forensic or other specialist expertise.

Reconstruction findings, analytical inferences and legal or systemic conclusions are kept separate. Where the evidence supports a challenged finding, that result must be recorded. Where the evidence contradicts the commissioning party's present understanding, that result must also be recorded. Where the record is insufficient, the outcome is unable to determine.

Public interest and next steps

The public-interest question is not whether one litigant's account should be preferred to a judicial or institutional account. It is whether serious findings and continuing consequences can be independently tested against a preserved source record, and whether accountability processes are capable of identifying and determining the underlying evidential questions rather than merely repeating earlier characterisations.

The Prime Minister was placed on formal notice of this external evidential process on 7 September 2026. That correspondence explains the independent archive, Project A, the first bounded report and the intention to maintain open correspondence as material outputs develop.

Members of Parliament and the press are being provided with this press release so that the existence and purpose of the project are on the public record. They are not being asked to adjudicate the underlying litigation or allegations.

The enclosed one-page Methodology Summary explains the principal safeguards. The full technical methodology is retained as a project governance document and can be made available where substantive professional scrutiny of the methodology is required.

The purpose is not to construct a competing narrative. It is to create a record against which competing narratives can be tested. Evidence comes first; conclusions follow it.

Email body

Dear Editor,

Please find attached a press release and supporting materials concerning the launch of the Independent Evidential Reconstruction Project.

The project is establishing an independently preserved evidential record and forensic reconstruction process to test whether serious judicial findings and material procedural outcomes can be traced back to the evidence and processes from which they arose.

The attached package includes the project methodology summary, my open correspondence to the Prime Minister dated 7 September 2026, and the first bounded evidential report and supporting source-document bundle.

I am not asking you to accept my account of the underlying matters. The purpose of the project is to make the primary evidence independently testable.

The attached materials are provided for your review and, if relevant, reporting.

Kind regards,

Nadia Zahmoul

STATEMENT TO MEMBERS OF PARLIAMENT

Independent Evidential Reconstruction Project

11 September 2026

Today, 11 September 2026, I publicly launched the **Independent Evidential Reconstruction Project**. A press release and the accompanying public distribution package were sent to members of the media this morning.

The project has been established to address a narrow but fundamental question: **can serious judicial findings, material procedural outcomes and subsequent institutional accounts be traced back to the evidence and processes from which they arose?**

The matters underlying the project have already passed through family proceedings, appellate proceedings, judicial review and ministerial, Parliamentary, oversight and law-enforcement channels. There have been many decisions, responses and procedural outcomes. The question now being independently examined is different: whether the underlying evidential propositions themselves received substantive determination, and whether material recorded findings withstand comparison with the primary source record.

The project does **not** ask Members of Parliament to determine the underlying litigation or allegations, or to accept my account of events.

Instead, an independent **Primary Evidential Record** is being established: a preserved, searchable, indexed and provenance-controlled collection of the original material. Defined questions will then be reconstructed against that record, including supporting, contrary and qualifying evidence. Where the evidence does not resolve a question, that will be recorded as the outcome rather than converted into proof. Independent legal and, where necessary, specialist assessment will follow the factual reconstruction.

A central safeguard is that **no institution whose conduct or response falls materially within the scope of a reconstruction controls the evidential record, the questions, the reconstruction, the legal or specialist assessment, the independent review or the conclusions.**

The first bounded reconstruction, **Project A**, covers February to June 2024. The process is deliberately capable of supporting, qualifying or contradicting my position; it is not designed to prove a predetermined account.

The first public evidential report concerns two digital devices placed into court-linked custody in 2021 and the subsequent documentary history of their custody,

proposed review and preservation. Report No. 1 is supported by a **43-item, 293-page source-document bundle with hash manifest**, enabling the documentary propositions to be checked against the underlying evidence.

The Prime Minister was formally notified of the project by open correspondence on **7 September 2026**. That correspondence explained that the purpose of making the process open is not to substitute publicity for determination, but to ensure that its existence, methodology and outputs are themselves capable of external scrutiny.

I am providing the same public distribution package to Members of Parliament for information and scrutiny.

I am not asking Parliament to accept a competing narrative. I am asking that the existence of an independently testable evidential process - and the questions it raises about evidence, due process and accountability - be known.

The governing principle is simple:

Evidence comes first; conclusions follow it.

Nadia Zahmoul

STATEMENT TO MEMBERS OF PARLIAMENT
Independent Evidential Reconstruction Project
11 September 2026

Today, 11 September 2026, I publicly launched the Independent Evidential Reconstruction Project. A press release and the accompanying public distribution package were sent to members of the media this morning.

The project has been established to address a narrow but fundamental question: can serious judicial findings, material procedural outcomes and subsequent institutional accounts be traced back to the evidence and processes from which they arose?

The matters underlying the project have already passed through family proceedings, appellate proceedings, judicial review and ministerial, Parliamentary, oversight and law-enforcement channels. There have been many decisions, responses and procedural outcomes. The question now being independently examined is different: whether the underlying evidential propositions themselves received substantive determination, and whether material recorded findings withstand comparison with the primary source record.

The project does not ask Members of Parliament to determine the underlying litigation or allegations, or to accept my account of events.

Instead, an independent Primary Evidential Record is being established: a preserved, searchable, indexed and provenance-controlled collection of the original material. Defined questions will then be reconstructed against that record, including supporting, contrary and qualifying evidence. Where the evidence does not resolve a question, that will be recorded as the outcome rather than converted into proof. Independent legal and, where necessary, specialist assessment will follow the factual reconstruction.

A central safeguard is that no institution whose conduct or response falls materially within the scope of a reconstruction controls the evidential record, the questions, the reconstruction, the legal or specialist assessment, the independent review or the conclusions.

The first bounded reconstruction, Project A, covers February to June 2024. The process is deliberately capable of supporting, qualifying or contradicting my position; it is not designed to prove a predetermined account.

The first public evidential report concerns two digital devices placed into court-linked custody in 2021 and the subsequent documentary history of their custody, proposed review and preservation. Report No. 1 is supported by a 43-item, 293-page source-document bundle with hash manifest, enabling the documentary propositions to be checked against the underlying evidence.

The Prime Minister was formally notified of the project by open correspondence on 7 September 2026. That correspondence

explained that the purpose of making the process open is not to substitute publicity for determination, but to ensure that its existence, methodology and outputs are themselves capable of external scrutiny.

I am providing the same public distribution package to Members of Parliament for information and scrutiny.

I am not asking Parliament to accept a competing narrative. I am asking that the existence of an independently testable evidential process - and the questions it raises about evidence, due process and accountability - be known.

The governing principle is simple:

Evidence comes first; conclusions follow it.

Nadia Zahmoul

THE IMERMAN DEVICES

Due Process, Evidential Integrity, Financial Prejudice and the Right to an Effective Remedy

OPEN CORRESPONDENCE · 15 SEPTEMBER 2026

The Rt Hon the Prime Minister

10 Downing Street

London SW1A 2AA

15 September 2026

Dear Prime Minister,

The central issue is exceptionally serious. The criminal relevance of the financial and cryptocurrency material was known during the proceedings: it was raised in written evidence, submissions and oral evidence and addressed during the hearing. The documentary record also establishes repeated subsequent notification of the criminal relevance of the devices, including to the court-appointed crypto Single Joint Expert, who expressly referred to the risk of jeopardising an ongoing criminal investigation.

Two digital devices entered the court-connected evidential process for review, yet they were never forensically examined and cannot presently be accounted for on the reconstructed custody record. If those devices cannot now be located, secured and shown to have been preserved intact, the implications extend beyond defective evidence handling. The circumstances raise serious questions of due process and potential official misconduct and require investigation of whether any conduct concerning the preservation, custody or disappearance of the evidence could amount to misconduct in public office, obstruction of justice or another criminal offence. I do not prejudge those questions. I require them to be investigated.

This is not an isolated matter. The Imerman devices are one discrete and independently verifiable evidential failure within the wider matter of judicial integrity and due process arising from these proceedings. Construction of the Primary Evidential Record is now under way. That record will preserve and reconstruct the underlying evidence, provenance, submissions, transcripts, decisions and institutional responses necessary to test material findings and decisions against the evidence from which they are said to arise. The Imerman devices are addressed first because the issue is immediate, concrete and capable of independent verification. Their resolution is necessary, but it will not resolve the wider questions of judicial integrity and due process now under independent reconstruction.

NOTE ON THE CRIMINAL REFERRALS. The criminal referrals and supporting investigative materials referred to in this correspondence are submissions to Sir Mark Rowley, Commissioner of the Metropolitan Police, for investigation and assessment by the competent law-enforcement authorities. Their transmission or publication as part of the evidentiary record does not represent findings by the Metropolitan Police or any other public authority. They are preserved and identified as submissions so that their

provenance, contents, supporting evidence and subsequent institutional handling remain capable of independent verification.

Why I am writing openly to the Prime Minister's Office

I am writing openly to the Prime Minister's Office because, after more than two years of proceedings, I have not obtained an effective process by which the evidential and procedural failures I have raised can be independently examined and, where established, remedied. Instead, the process has become recursive: concerns about the integrity of the underlying proceedings are repeatedly returned to, or determined through, the same institutional structures whose acts, omissions or recorded conclusions are themselves in question. I no longer regard that as an effective accountability mechanism.

I have therefore decided to externalise the evidentiary record. The Primary Evidential Record now under construction will support a methodical, systematic and meticulous forensic reconstruction in which every material decision, finding and, where necessary, paragraph of the recorded judicial narrative is tested against the primary evidence from which it is said to arise. I do not presently consider the decisions produced by the courts in my case to be safe; some continue, in my position, to cause serious and accumulating harm. Each material decision will therefore be subjected to independent legal assessment against the reconstructed record and, subject to applicable legal restrictions, the resulting analyses and assessments will be published openly. I will maintain open correspondence with the Prime Minister's Office throughout that process.

The Ubuntu material

The materiality of the missing devices is no longer hypothetical. Hard-copy material recovered from the Ubuntu computer was reviewed in December 2023 by a cryptocurrency specialist. The review identified matters of significant importance to the financial proceedings, including a post-2019 Bitcoin wallet containing Lightning and on-chain balances; ViaBTC mining activity requiring explanation; evidence of Bitfinex registration; transaction activity involving an unresolved Binance deposit address; and a private key which the specialist considered evidence of control of a Multibit Classic wallet. His subsequent formal disclosure analysis stated that the corresponding post-2019 Bitcoin wallet and its addresses had not been disclosed and that the existence of other Bitcoin wallets could not be identified, determined or dismissed without rectification of the disclosure deficiencies. The surviving hard copies therefore demonstrate precisely why preservation and forensic examination of the original Ubuntu computer mattered.

Financial significance and avoidable harm

The financial significance can be illustrated without speculation. The surviving material records identifiable cryptocurrency quantities, including a Coinbase portfolio containing 36.92765255 BTC and 75.41329163 ETH, together with BCH and BSV positions, 29,873.06 USDT, a ViaBTC balance subsequently acknowledged as 0.16 BTC, and the smaller post-2019 Lightning/on-chain balance. The indicative market value of those recorded positions on 15 September 2026 was approximately US\$3.1 million. This is not advanced as

a finding that every position was undisclosed or represented recoverable loss. Its significance is narrower and more fundamental: the surviving hard-copy record demonstrates that the unexamined device contained financially material evidence.

My resulting financial prejudice was avoidable. Potentially material digital evidence entered an evidential process for review; the review was not completed; the devices were not forensically examined; and the opportunity to preserve and test their underlying digital evidence was therefore lost to the determination of the financial case. The subsequent cryptocurrency review demonstrates the importance of what survived in hard copy. Had the original devices been safeguarded, imaged and examined when they were available, the underlying wallets, accounts, metadata and transaction histories could have been preserved and investigated before consequential findings and financial liabilities were imposed.

Evidence, impunity and equality before the law

The integrity of the justice system depends upon preserving the evidence by which serious allegations can be investigated and consequential findings can be tested. When potentially material evidence disappears from the evidential process, the damage is structural: what cannot be preserved cannot reliably be examined; what cannot be examined cannot properly be tested; and conduct that cannot effectively be investigated risks escaping accountability altogether.

That produces the fundamental equality issue in this case: **no evidence → no effective investigation or testing → risk of impunity**. I remain subject to substantial enforceable consequences while potentially material evidence capable of testing another person's financial conduct was never forensically examined and cannot presently be accounted for. Equality before the law cannot mean rigorous enforcement of consequences against one person while failures affecting potentially material evidence concerning another produce no equivalent accountability. **If that asymmetry is permitted to persist, people are not equal under the law.**

Due process, prejudice and effective remedy

The relevant loss is not simply two computers. It is the loss of an evidential opportunity: preservation, forensic examination, disclosure, challenge, testing and determination of potentially material evidence. The correct counterfactual is straightforward: what evidential and procedural position would I have occupied had the devices been safeguarded, examined and dealt with through the process for which they were surrendered? The difference between that position and the position in which I now find myself is the prejudice that must be independently established, quantified and remedied.

Continuing consequences

There are continuing consequences while that examination is under way. Litigation funding obtained to pay for representation in the underlying proceedings became repayable on their conclusion, and is the subject of live proceedings in the Chancery

Division, Detach Lending Limited v Zahmoul, BL-2024-001217, in which default judgment for £1,008,848.42 was entered on 31 March 2025. I do not consider it safe for those proceedings to progress further against me while the integrity of the process that produced the liability is itself under independent examination. My position is that no further substantive step should be taken in them until that review is complete and its conclusions are capable of scrutiny.

This repeats the position formally notified to your office on 7 September 2026. **I am demanding my right to know where the evidence is and to obtain a substantive determination of what happened to it on the public record.** More broadly, I oppose the continuation or enforcement against me of consequential court decisions while the integrity of the evidential process from which those consequences arose remains unresolved. Before further substantive consequences are imposed, the evidential record must be addressed transparently and openly and the whereabouts, custody and integrity of the digital devices established. **A judicial process that cannot account for potentially material evidence entrusted to it, or demonstrate that due process and the law were followed in dealing with that evidence, cannot safely continue to impose consequences arising from the process whose integrity is in question.**

What must now happen

The remedy is practical. The devices must be located and secured; their complete chain of custody reconstructed; their forensic condition and evidential integrity established; the circumstances in which they ceased to be held by the last recorded custodian investigated; the underlying criminal matters investigated by the competent authorities; and the resulting prejudice independently assessed and quantified. That process must lead to an effective remedy.

How can extraordinary financial consequences continue to be enforced while potentially material digital evidence placed into a court-connected evidential process was never forensically examined, surviving material subsequently demonstrated its significance, and the original devices themselves cannot presently be accounted for?

If any institution contends that substantive enforcement may nevertheless continue, I require it to identify the legal and evidential basis upon which consequences of this magnitude can properly continue to be imposed while the whereabouts, integrity and custody of potentially material evidence remain unresolved.

The law either applies equally to everyone, or it does not.

I am asking the responsible institutions to establish what happened, identify accountability where the evidence supports it, determine and quantify the prejudice caused, and provide an effective remedy.

Please begin that process.

Yours sincerely,

Nadia Zahmoul

Email body

Dear Prime Minister and Sir Mark,

Please find attached Email 1 of 3 in a single controlled transmission concerning the Imerman devices.

This email contains my open correspondence dated 15 September 2026, together with the core evidential reconstruction record concerning the devices, their custody, non-examination and subsequent referral history.

The complete transmission is being sent in three emails:

- Email 1 of 3 — Open Correspondence + Core Imerman Record
- Email 2 of 3 — Confidential Criminal Referrals + Current Imerman Referral
- Email 3 of 3 — Confidential Underlying Evidential Material

The three emails form a single distribution package and should be read together. The accompanying Attachment Schedule identifies the status and handling of the transmitted material. In particular, the fact that my covering correspondence is open does not make the confidential or restricted material transmitted separately suitable for public publication. This distinction is also expressly recorded in the Attachment Schedule.

I request acknowledgement of receipt of all three emails and their attachments once the transmission is complete.

Kind regards,
Nadia Zahmoul

Email body

Dear Prime Minister and Sir Mark,

Please find attached Email 2 of 3 in the transmission concerning the Imerman devices.

This email contains the three-part confidential criminal referral, together with my criminal referral concerning the Imerman devices dated 7 September 2026.

The material is transmitted for investigation and assessment by the competent law-enforcement authorities. The criminal referrals are submissions and do not represent findings by the Metropolitan Police or any other public authority.

This material is confidential and supplied for controlled recipient use. It is not made public by reason of the open correspondence transmitted in Email 1.

Email 3 of 3 will transmit the underlying evidential material supporting the referral record.

Kind regards,

Nadia Zahmoul

Email body

Dear Prime Minister and Sir Mark,

Please find attached Email 3 of 3 in the transmission concerning the Imerman devices.

This email contains the underlying evidential and analytical material supporting the referral record transmitted in Emails 1 and 2, including the surviving Ubuntu material and the specialist review of that material.

The documents are transmitted in their existing evidential form and should be read in accordance with their individual status and provenance. Analytical or reconstruction material is provided as such and is not presented as a finding by the Metropolitan Police or any other public authority.

This material is confidential and supplied for controlled recipient use. It is not made public by reason of the open correspondence transmitted in Email 1.

This completes the three-email transmission of 15 September 2026. I request acknowledgement of receipt of Emails 1–3 and their attachments.
